## BORDEAUX 2005

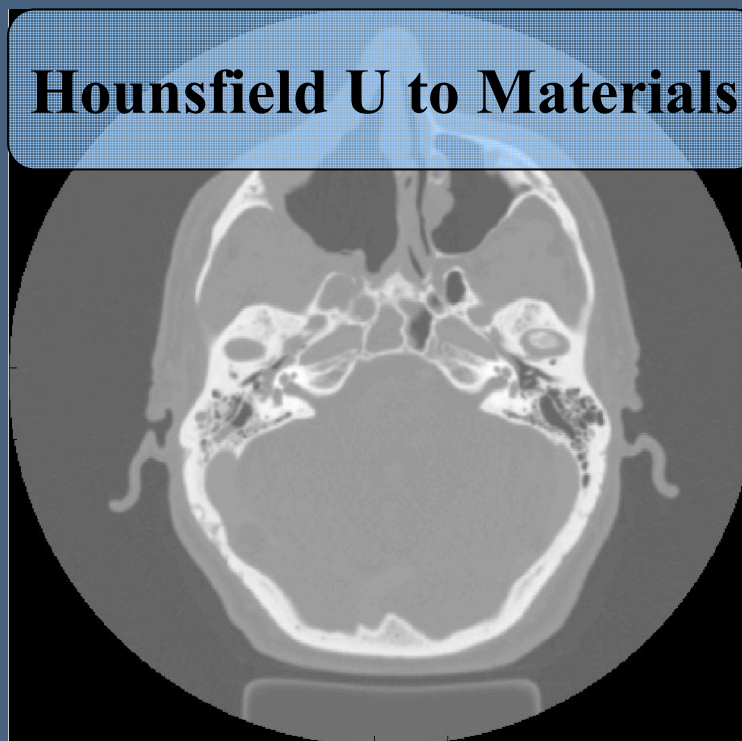

```
G4FieldManager* fieldMgr  
    = G4TransportationManager::GetTransportation  
fieldMgr->SetDetectorField(MagneticFields);  
fieldMgr->CreateChordFinder(MagneticFields);  
fieldIsInitialized = true;
```

# Clinical implementation of Monte Carlo dose calculation: strategies and challenges

## Physics Setup

## Issues related to dose calculations on CT data:

### – HU conversion –

#### Solution within the GEANT4 framework

- **Solution:**  
HU space is divided into 24 groups (Schneider et al.) with members of each group sharing the same element composition but differ in mass density

#### Modification of the GEANT4 source code

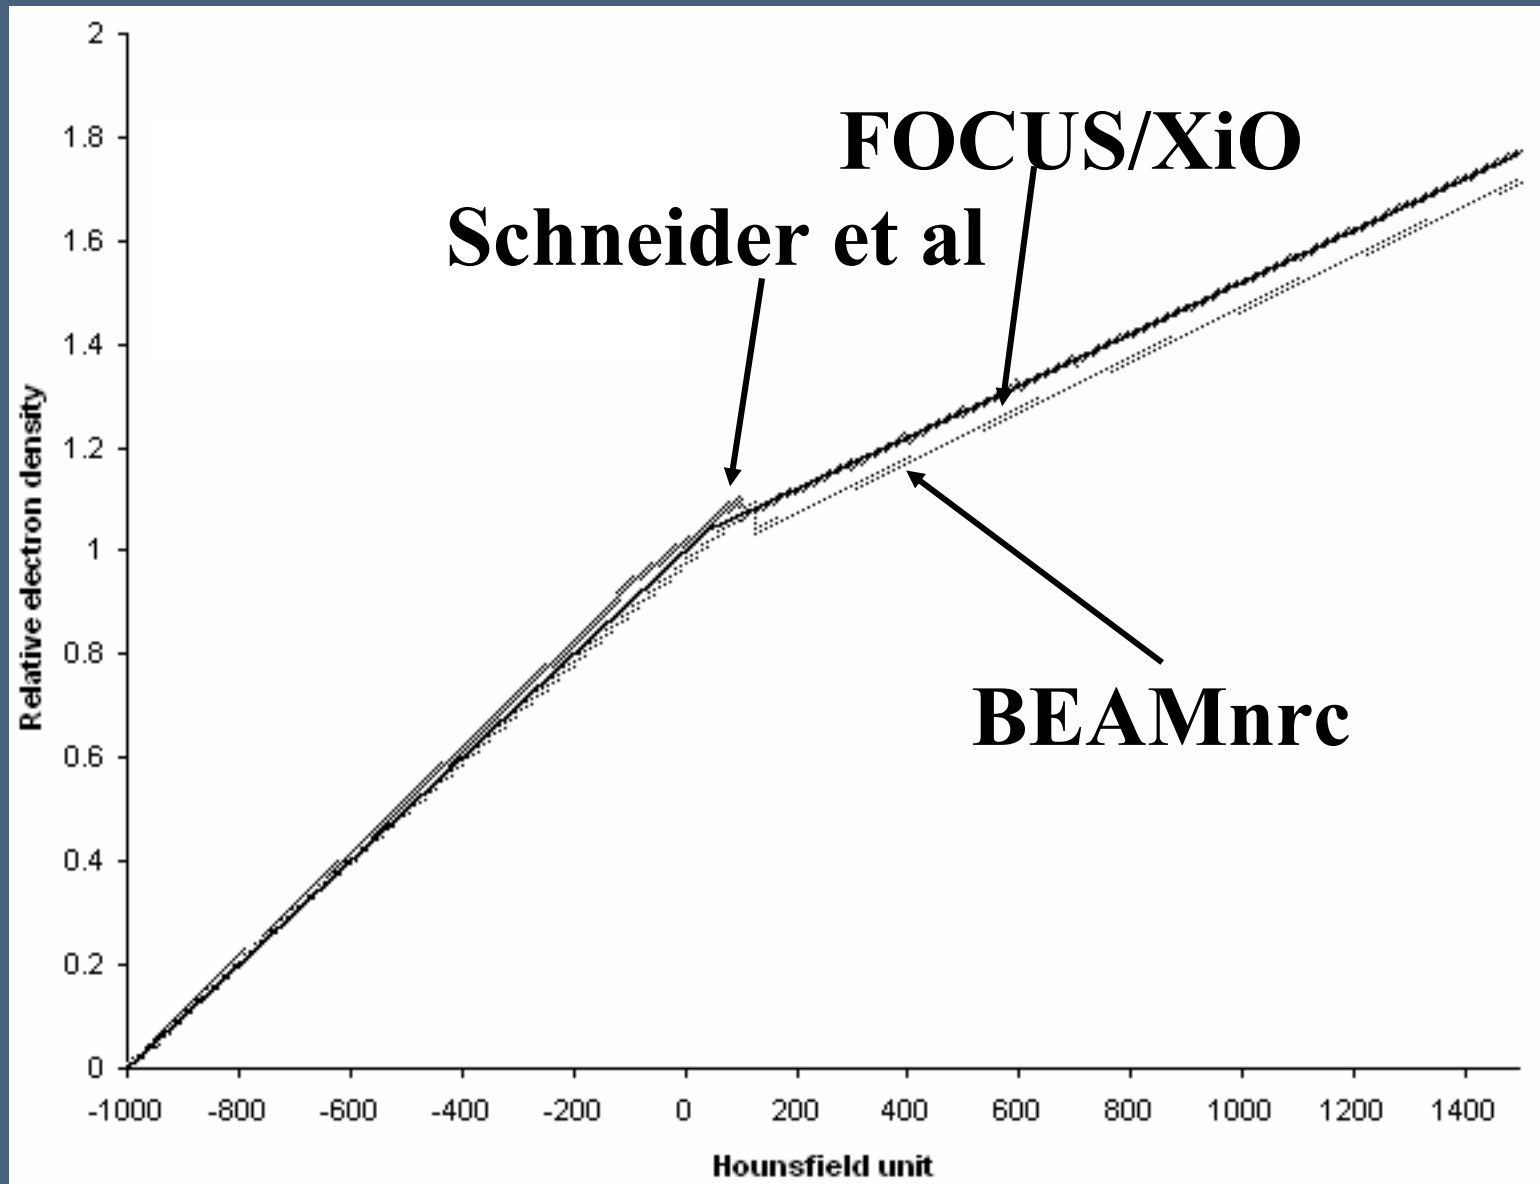

- **Dynamic assignment of mass density**  
Only one material is defined for each CT HU group.  
3000 materials (cross section sets)  
The composition of the material is preserved, but the mass density varies

# – HU conversion –

Geant 4

BORDEAUX 2005

# Clinical implementation of Monte Carlo dose calculation: strategies and challenges

## Physics Setup

## Issues related to dose calculations on CT data:

### – Memory Consumption –

#### Solution within the GEANT4 framework

- Parameterized volume:  
allows the least computer memory usage for CT voxels (two bytes per voxel)

#### Modification of the GEANT4 source code

### Slow tracking through

- Much faster way to transport particles in CT voxels  
Abandoned the general, but low-efficient algorithm in GEANT4.

### parameterized volumes

- + Cross section data are no longer loaded at material change but loaded once at initialization

# Clinical implementation of Monte Carlo dose calculation: strategies and challenges

## Physics Setup

Geant 4

BORDEAUX 2005

```
myDetector->Set_Snout(SnoutCmd->GetNewDoubleValue(newValues));
```

Geant 4

# Clinical implementation of Monte Carlo dose calculation: strategies and challenges

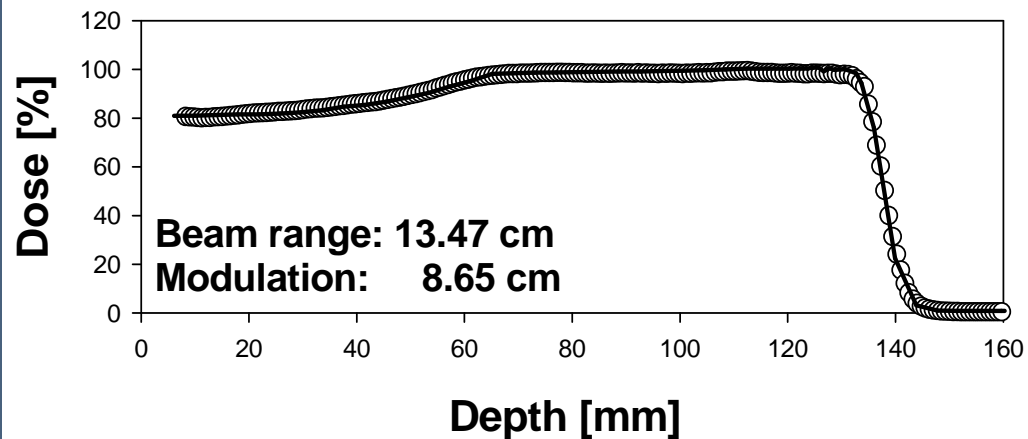

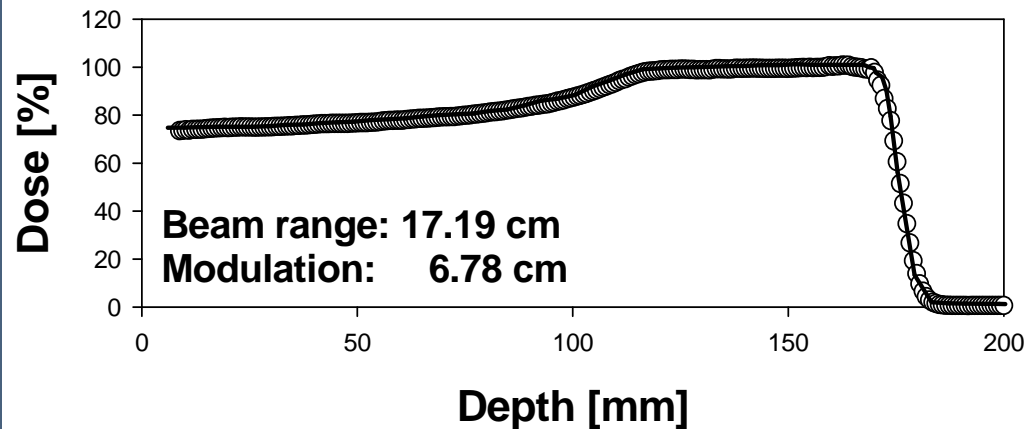

## Physics Setup

## Example: Head and Neck CT scan

134 CT slices,  $512 \times 512$  voxels/slice,  
 $0.488 \text{ mm} \times 0.488 \text{ mm} \times 1.25/2.5 \text{ mm}$

Six fields:

	Gantry	Couch	ISO
AP1A	$0^\circ$	$0^\circ$	1
AS1A	$65^\circ$	$270^\circ$	1
RS1A	$305^\circ$	$50^\circ$	1
RA1A	$295^\circ$	$0^\circ$	2
RS2A	$300^\circ$	$60^\circ$	2
AS2B	$90^\circ$	$270^\circ$	3

Format: DICOM or planning program internal

FOCUS

Monte Carlo

FOCUS

Monte Carlo

# Conclusion

Routine use of (proton) Monte Carlo dose calculation (using GEANT4)

- requires work in many different areas of treatment head and patient modeling
- requires establishing a link between treatment planning and Monte Carlo
- is being done at MGH

Geant 4
